10. Extra Features, Tips & Tricks	30

1. Welcome

Welcome to SoleAIO V1. The user experience has been completely overhauled with this version, and this PDF document will introduce you to everything SoleAIO V1 has to offer.

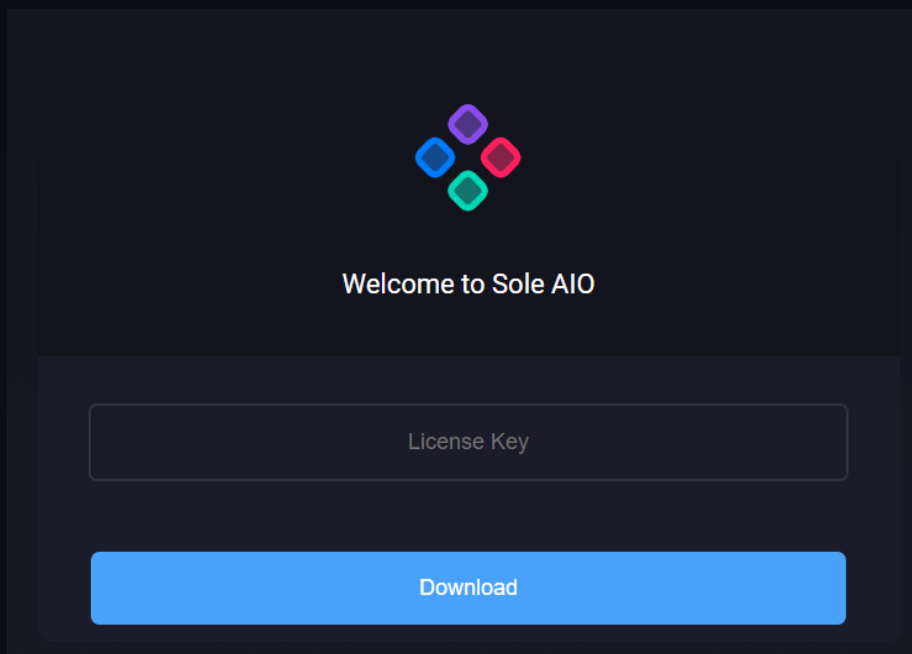

SoleAIO is a Windows application built to help you purchase coveted items from the websites you desire. This new user-focussed UI makes it even easier for you to purchase what you want, when you want, with an easy to follow and intuitive design.

SoleAIO currently supports the following sites: Adidas, YeezySupply, Shopify, Supreme, Footsites, Finishline/JD, Mesh and Off-White.

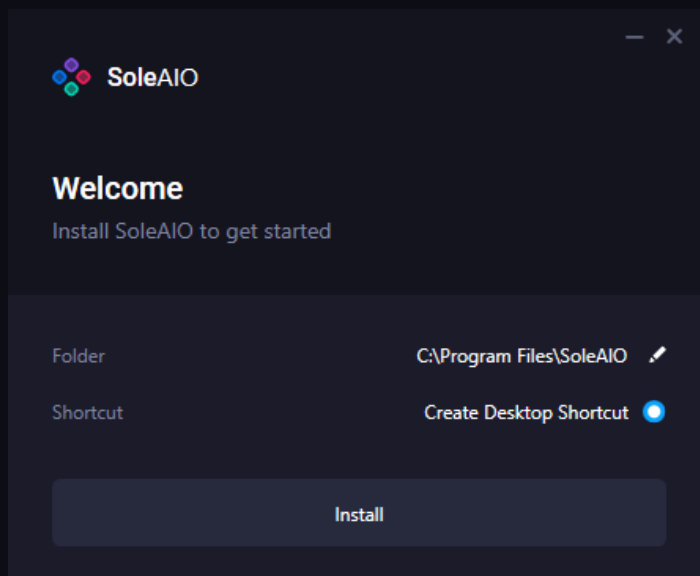

2. Installation

To install: Head to soleaio.dev/download. You will be prompted to enter your License Key (20 characters long). Upon entering a correct license key, your download will begin.

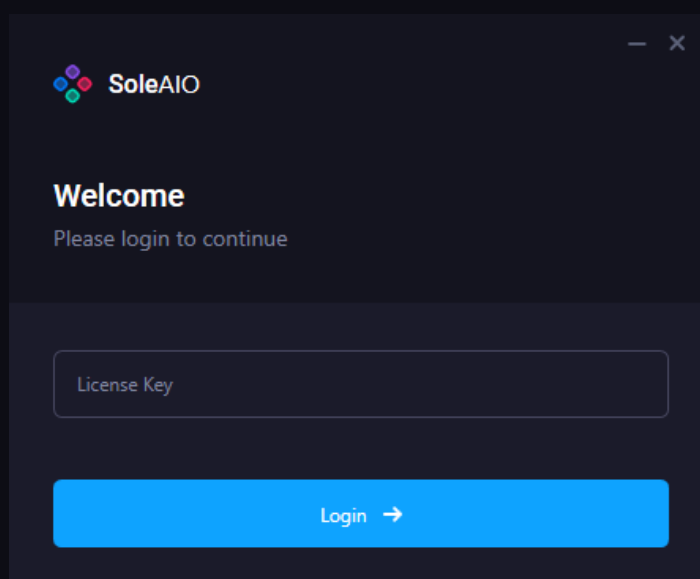

2. Installation (Continued)

Once downloaded, you will have a .exe named 'SoleAIO Installer', run this .exe and you will be greeted with a welcome message asking you to install SoleAIO. Here you can select the Folder the bot will be installed in, and whether you want to create a desktop shortcut.

Upon launching SoleAIO once you have installed, you will be greeted with this welcome window. Paste in your license key and click "Login". *Note: Ensure there are no extra characters or spaces when pasting in your 20-digit license key.*

3. Settings

Delays:

These are the default monitor and retry delays that will be used by the bot. Most people decide to edit their delays via the Delays Window (rather than on the settings page), which can be opened by clicking 'Delays' to the right hand of this section (or pressing F3 on your keyboard at any time), therefore changing/editing delays on the Settings page may not be necessary if instead making use of the Delays Window.

Webhook:

The webhook sends checkout and decline notifications to a channel in Discord that you pre-determine. This allows you to view details of your checkouts including the site, order number and profile used. The positive webhook will show Success, with the negative webhook showing Decline notifications. You may choose to put the same webhook for both of these, however these are available to be split if desired.

Notifications:

Here you can select whether you wish to receive desktop and in-bot notifications for successful and unsuccessful checkouts. Simply select/deselect if you wish to receive or not receive these notifications.

Checkout Sounds:

Here you can change the sound that the bot makes when there is a checkout. Simply click the pencil icon and then select your desired sound from the list.

Quick Task:

This is where you are able to set the Profiles and Proxy Lists used when you use a Quick Task. A Quick Task is where you click a link from your monitor group when you see a specific item you wish to purchase release/restock. This automatically creates a task within SoleAIO with that product you saw in the monitor. The Profile(s) and Proxy List(s) selected here will be the ones used when a Quick Task is created.

Autosolve:

If you make use of AYCD's Autosolve feature, you can enter your Autosolve API Key and Autosolve Access Key here. AYCD's Autosolve feature routes captchas via their captcha solving program rather within SoleAIO. *Note: If you are NOT making use of AYCD's Autosolve feature, ensure to leave both of the fields blank.*

Import/Export:

This can be used to both Import/Export different aspects of the bot's data, which is useful for if a friend is running tasks for you, or if you switch machines/to a server. You can select whether to Export/Import the entirety of the bot's data, or only export certain aspects of the bot's data, including: Task Groups, Proxy Groups, Billing Groups, Captcha Profiles, Account Lists or Cookie Lists.

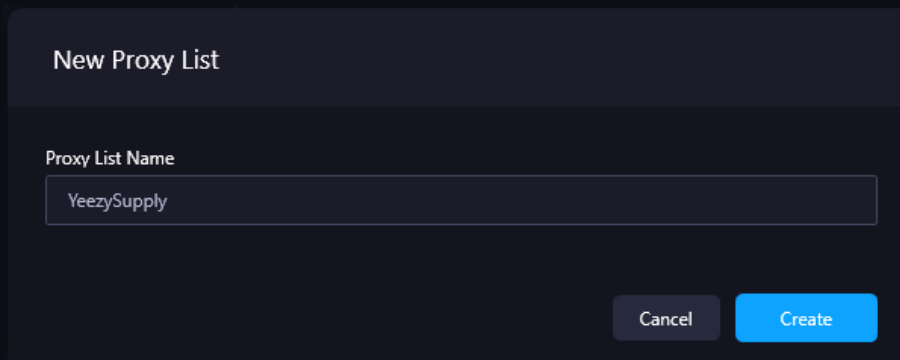

4. Proxies

The proxies page allows you to add, remove and test proxies' speeds to specific websites. You are also able to create different Proxy Lists, to allow for ease of selection when creating different tasks for different sites that require different proxies. When creating a task, you will select a specific Proxy List to use for that task. Proxy Lists allow for you to split up proxies how you desire.

To begin, click the blue "+" icon beside "Proxies".

You will then be greeted with a pop up asking for a name for the Proxy List. You can name these however you desire, however it can be useful to name them dependent on the site/release you plan to use them for, the region they are intended for, or the provider purchased from. In this example, we wish for the proxies to be used for YeezySupply, so will name it this way to remain clear.

A screenshot of a "New Proxy List" dialog box. The title "New Proxy List" is at the top left. Below it, the label "Proxy List Name" is positioned above a text input field. The input field contains the text "YeezySupply". At the bottom right of the dialog, there are two buttons: a grey "Cancel" button and a blue "Create" button.

Now that a Proxy Group has been created, details will show on the right. You can now add proxies to this list by clicking the blue "Import Proxies" button now displayed. Simply paste your proxies into this import input (one proxy per line, separated IP:PORT, or IP:PORT:USER:PASS), and click "Import".

Once imported, the proxies will be listed within the Proxy List, you can test/delete them separately using the icons beside each proxy, or mass test them using the "Clear All" and "Test All" buttons located at the top of the page.

You can also delete an entire list using the Red Trash Can icon next to the Proxy List name, located at the top of the page, or rename that Proxy List by clicking the White Pencil icon.

You are able to create as many different Proxy Lists as you desire and can also make use of the "Search Proxy Lists" feature, to make it easier to locate different Proxy Lists.

5. Billing

SoleAIO V1 introduces Billing Groups – this allows you to select an entire Billing Group when creating a task, creating a task with each profile within that Billing Group. This streamlines the task creation process tremendously. When creating tasks, you still also have the option to create a task with a single profile from within a Billing Group if you do not wish to create tasks with every profile from within a group.

To begin, click the blue “+” icon beside “Billing”.

You will then be greeted with a pop up asking for a name for the Billing Group. You can name these however you desire, however it can be useful to name them dependent on what sites/releases you will be using these profiles on for ease. Billing Groups are also useful if you are running tasks for several friends across several sites – you are able to separate friends’ profiles and run their Billing Groups on their desired sites.

A dark-themed dialog box titled "New Billing Group". It contains a text input field labeled "Billing Group Name" with the text "Finishline Profiles" entered. At the bottom right of the dialog are two buttons: a grey "Cancel" button and a blue "Create" button.

Now that a Proxy Group has been created, details will show on the right. You can now add Profiles to Billing Group by clicking the blue “+” button now displayed in the right-hand pane. There is then three tabs:

Profile Creator – General:

The first page in the Profile Creator is the “General” Tab. This is where you will enter the general information for your profile, including:

- **Profile Name:** Enter a name for this profile. This is the name that will be viewed during Task Creation, and will be displayed in your Discord Webhook, therefore it can be useful to make sure you name it something that ensures you know which card/details/information this profile includes, such as “Visa 4056”.

5. Billing (Continued)

- **Email:** Enter the email you want to use for this specific profile.
- **Phone Number:** Enter the phone number you want to use for the profile.
- **Card Number:** Enter the 16 digit long number on the front of your credit/debit card.
- **Cardholder Name:** Enter the name of the cardholder here (printed on front of the credit/debit card).
- **Expiry Month/Year:** Enter the expiration date of your credit/debit card.
- **CVV:** Enter the security code, which is usually three digits and found on the reverse side of your credit/debit card. For American Express, this is four digits and located on the front of the debit/credit card.
- **Card Type:** Enter the card provider (Visa, MasterCard, American Express, Solo, Discover, Mastercard, etc).

The screenshot shows a 'Profile Creator' form with a 'Billing' tab selected. The form contains the following fields and options:

- Profile Name:** Text input field.
- Email:** Text input field.
- Phone Number:** Text input field.
- Card Number:** Text input field.
- Cardholder Name:** Text input field.
- Expiry Month:** Dropdown menu.
- Expiry Year:** Dropdown menu.
- CVV:** Text input field.
- Card Type:** Dropdown menu.
- Options:** Two radio buttons: 'Billing Same as Shipping' (selected) and 'One Checkout per Profile'.
- Buttons:** 'Cancel' and 'Create Profile +'.

- **Billing Same as Shipping:** Selecting this will mean the “Billing” Tab become inaccessible. If the address you are shipping to is the same as your cards billing address (which on most occasions: it is recommend being, as some sites ensure Billing matches Shipping or will decline the checkout), select this option.
- **One Checkout per Profile:** This means that once one profile has checked out an item, no more tasks will be attempted to be checked out with the same profile. *Note: This is not always possible, because if other tasks are already 'Processing', then they will still go through – it is too late for them to be stopped.*

5. Billing (Continued)

Profile Creator – Shipping:

The second page in the Profile Creator is the “Shipping” Tab. This is where you will enter your desired shipping information, including:

- **First Name:** Enter the first name of the addressee being shipped to.
- **Last Name:** Enter the last name of the addressee being shipped to.
- **Address 1:** Enter the first line of your address in this field. *Note: You are able to ‘jig’ within this field to make multiple profiles with the same address. Most common ways of doing this is by changing up wording (e.g. Street to St) or changing up the order (e.g. 27 Sole Road to Sole Road 27),*
- **Address 2:** Enter the second line of your address in this field, where necessary (not required).
- **City:** Enter your city in this field.
- **Zip:** Enter your Zip Code/Postal Code here.
- **Country:** Enter your country here using the drop-down list. *Note: You can begin typing to narrow results.*
- **State:** Enter your state here if applicable to your country (if it is not applicable, it will become greyed out).

The screenshot shows the 'Profile Creator' interface with the 'Shipping' tab selected. The form is titled 'Profile Name' and includes the following fields:

- First Name:** Text input field with placeholder 'First Name'.
- Last Name:** Text input field with placeholder 'Last Name'.
- Address 1:** Text input field with placeholder 'Address 1'.
- Address 2:** Text input field with placeholder 'Address 2'.
- City:** Text input field with placeholder 'City'.
- Zip:** Text input field with placeholder 'Zip'.
- Country:** Drop-down menu with placeholder 'Country' and a downward arrow.
- State:** Drop-down menu with placeholder 'State' and a downward arrow.

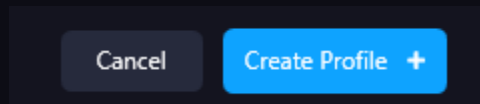

At the bottom right, there are two buttons: a grey 'Cancel' button and a blue 'Create Profile +' button.

5. Billing (Continued)

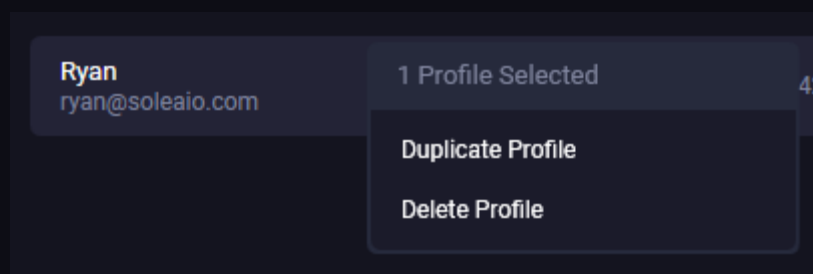

Profile Creator – Billing

The third and final page in the Profile Creator is the “Billing” Tab. This is where you will enter the Billing Information that matches your card if you have not selected “Billing Same as Shipping” on the “General” Tab. If you need to fill in this information, follow the sections noted above as they are the same.

If you have selected “Billing Same as Shipping” on the “General Tab”, this page of the Profile Creator will be inaccessible. Once you have filled in all required tabs, click the blue “Create Profile” button.

Once you have created a profile, it will appear in the right-hand pane within the Billing Group you first created. You can duplicate this profile by right clicking the profile and clicking “Duplicate Profile”. You can duplicate multiple profiles at the same time by first creating several profiles, dragging to select multiple and then select “Duplicate Profiles”. You can use this same method to mass delete profiles. You can also copy profiles from one Billing Group to another – simply right click a Profile when created and “Copy Profile”, go to another Billing Group, then right click and “Paste Profile”.

If you wish to delete all profiles from a Billing Group, click the red “Clear All” button. To the right of this button is an “Import” and “Export”. These both allow for the Import/Export of profiles allowing you to move machines without having to remake your profiles.

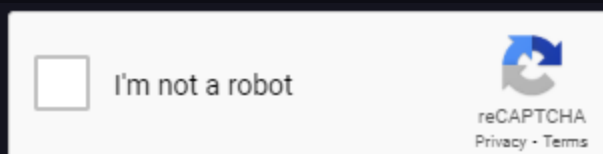

You can also delete an entire list using the Red Trash Can icon next to the Billing Group name, located at the top of the page, or rename that Billing Group by clicking the White Pencil icon.

You are able to create as many different Billing Groups as you desire and can also make use of the Search Feature, to make it easier to locate different Billing Groups and/or Profiles within these groups.

6. Captchas

Many stores use "Captcha" which is a 'test' offered by Google that many retailers utilize to try and combat bots on their stores. This 'test' comes in the form of the "I'm not a robot" box you are likely familiar with, where a sequence of images is generally needed to be selected and submitted to continue.

Google offer "One Clicks" to accounts that they deem active/human, where this 'test' can be automatically solved – thus drastically increasing your checkout time if these are utilized, therefore it is important to have Gmails that are deemed active/human so that this can be used to your advantage.

SoleAIO V1 introduces Captcha Profiles – never worry about your login being saved again! Captcha Profiles allow you to directly save and manage your Gmails within SoleAIO being able to change solver type and solver proxy at the click of a button, whilst staying logged into the same Gmail, even after closing the bot.

To begin, click the blue "+" icon beside "Captchas".

You will then be greeted with a pop up asking for a name for the Captcha Profile. You can name these however you desire, however it can be useful to name them dependent on what Gmail you plan to login with on this profile to be able to easily differentiate between your high-quality Gmails when running tasks, as one clicks and high captcha scores are generally imperative.

A screenshot of a "New Captcha Profile" dialog box. The title "New Captcha Profile" is at the top. Below it is a label "Solver Name" followed by a text input field containing the text "Ryan 0.9 Main". At the bottom right of the dialog are two buttons: a grey "Cancel" button and a blue "Create" button.

6. Captchas (Continued)

Now that a Captcha Profile has been created, you are able to log into your desired Gmail, to do so click “Open Gmail”, located at the bottom of the right-hand pane.

Once “Open Gmail” has been clicked, a browser will open. Simply sign into your Gmail with your usual username and password – once you have successfully done so, your emails will show. You can now close this browser you logged in with. You are now successfully logged into that Gmail on this Captcha Profile.

It is worth noting: If you farm your Gmails using a specific proxy in a program such as AYCD, you are able to set the “Solver Proxy” before logging in to Gmail, meaning the IP of that account will never switch and will remain on your farming proxy. To do so, simple paste the proxy into “Solver Proxy” and hit “Save”. *Note: You can do this at any time having already logged into the Gmail, along with changing the Solver Proxy at any time you desire.*

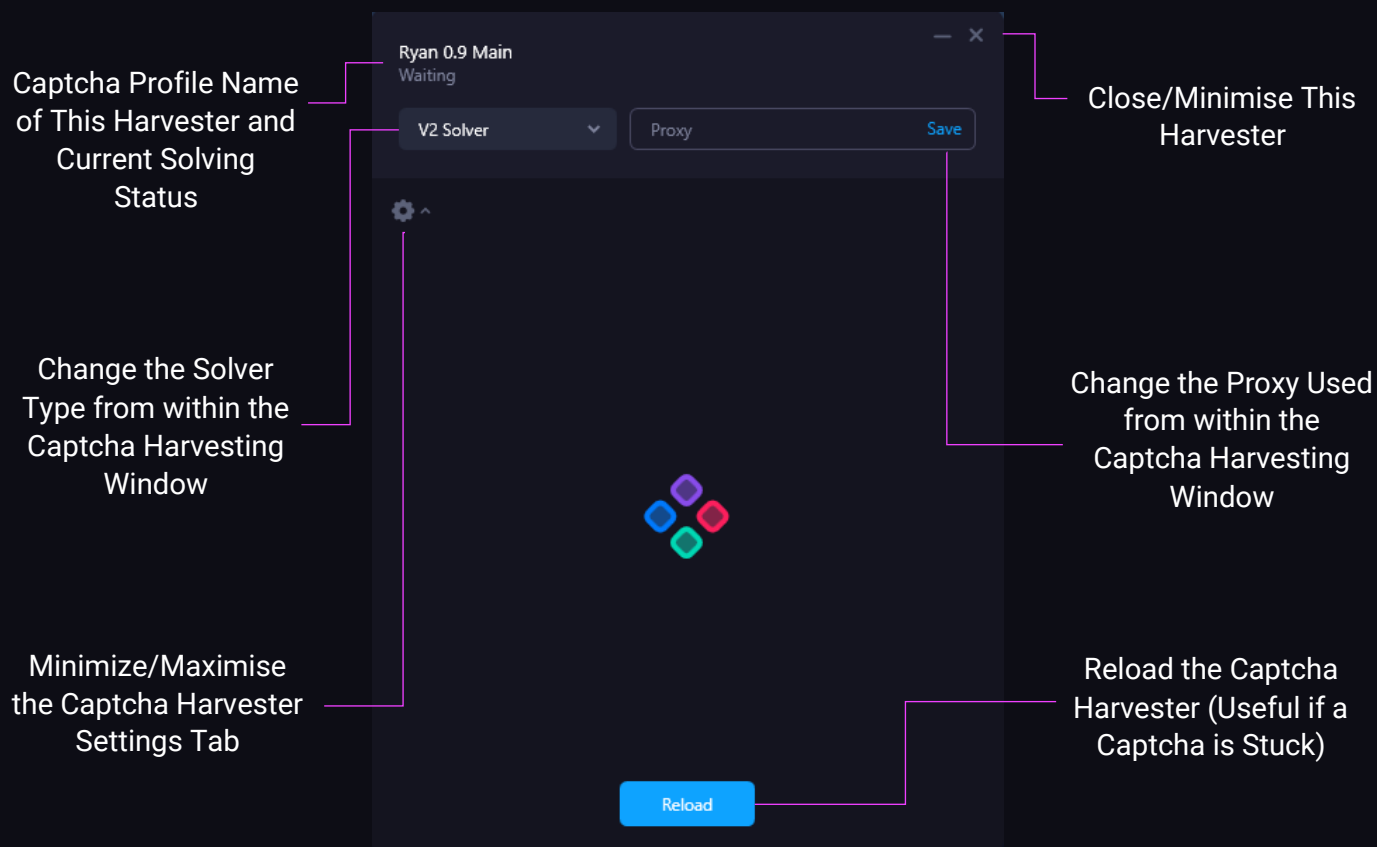

You are able to set what type of Captcha Harvester this profile opens by default with the “Solver Type” drop-down. This solver type is remembered on a profile basis, so until changed this will be the default Solver Type opened when you open the Captcha Harvester. *Note: You are able to change the Solver Type whenever desired directly within the Captcha Harvester when it is open, therefore setting the exact/correct type you require here is not necessarily needed.*

Once you have logged in, set a proxy (if desired), and chosen the Solver Type, you are ready to open the Captcha Harvester. To do so, simply click the blue “Open” text or icon in the left-hand pane.

6. Captchas (Continued)

Once the Captcha Harvester has been opened, you are still able to edit the Solver Type and Solver Proxy. The features available within the Captcha Harvester include:

You are also able to make use of the "Open YouTube" button within the , to open a browser and start watching YouTube whilst logged into the Gmail account. It is recommended to do this within the harvesters for a short period before the drop – which adds to Googles perception of you being active/human, thus increasing your chances of getting "One Clicks" when you need them during a release.

You can also delete a Captcha Profile using the Red Trash Can icon next to the Captcha Profile name, located at the top of the page, or rename the Captcha Profile by clicking the White Pencil icon.

7. Accounts

Certain stores require users to be signed into an account in order to be able to purchase. Account Lists within SoleAIO allow for unlimited accounts on unlimited sites to be saved in their own groups, allowing for users to create an Account List per site and then select this entire list when creating tasks. SoleAIO will then assign one account from this list per task. Some of the most popular sites that require the use of accounts are the likes of Concepts and Undefeated.

To begin, click the blue “+” icon beside “Accounts”.

You will then be greeted with a pop up asking for a name for the Account List. You can name these however you desire, however it can be useful to name them dependent on the site that the accounts are for. In this example, we will be importing accounts for Undefeated, so will simply use the site name for it to remain clear.

Now that an Account List has been created, details will show on the right-hand pane. You can add accounts to this list by clicking the blue “Import Accounts” button now displayed. Simply paste your accounts into this import input (one account per line, separating the Email and Password with a colon), and click “Import”.

7. Accounts (Continued)

Once imported, the proxies will be listed within the Account List, you can delete them separately using the icons beside each account, or clear the entire list using the “Clear All” button located at the top of the page.

You can also delete an entire Account List using the Red Trash Can icon next to the Account List name, located at the top of the page, or rename that Account List by clicking the White Pencil icon.

You are able to create as many different Account Lists as you desire and can also make use of the “Search Account Lists” feature, to make it easier to locate different Account Lists for different sites.

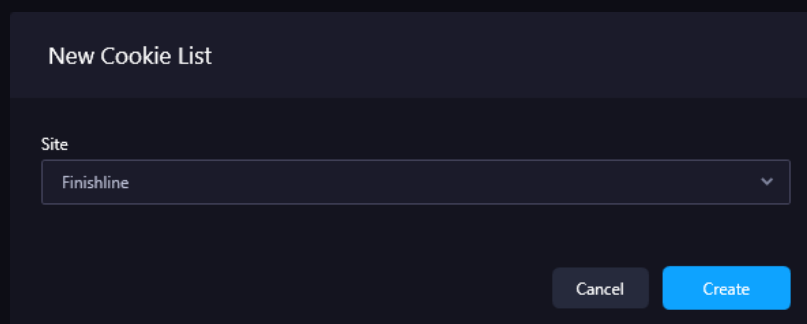

8. Cookies

Many sites require cookies to be able to run tasks. This includes: YeezySupply, Adidas, Finishline, JD Sports US and Mesh. You are able to pre-generate cookies within the Cookies Tab to allow for tasks that you run to use these pre-generated cookies. This means you do not have to wait and rely on generating cookies during the release, where it is often slow and difficult – you can generate before the drop and then have optimal speeds and success during a release.

First, you will have to create a “Cookie List” for a specific site, then run tasks within the Cookies Tab to generate cookies for that site. To begin, click the blue “+” icon beside “Cookies”.

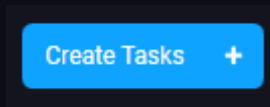

You will then be greeted with a pop up asking for the site you want to create a Cookie List for. Simply select the site you wish to pre-generate cookies for from the drop down list. In this example, we will be generating cookies for Finishline, so will select this as the site.

8. Cookies (Continued)

Once you have created a Cookie List, click the blue "Create Tasks" button below the site name.

You will be greeted with a pop up asking you to select a Proxy List, and Quantity of tasks. Simply select the Proxy List you wish to generate cookies on and select how many cookie generation tasks you wish to run.

Task Creator

Proxy List

DC Proxies

Quantity

- 1 +

Cancel Create Task +

This will now have created tasks within the Cookie List. Simply run these tasks to begin to generate cookies. Dependent on the site, a different amount of cookies will be generated before the tasks will automatically stop generating.

To start a single task generating, click the green start button located to the right of each task. To start all tasks at once, click the green "Start All" button located at the top right.

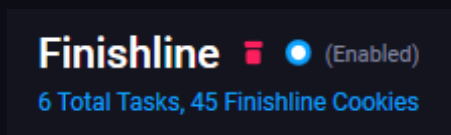

#	Site	Proxy List	Status		
1	Finishline	Zenu Shopify 2	Generated cookie 15/15		
2	Finishline	Zenu Shopify 2	Generated cookie 15/15		
3	Finishline	Zenu Shopify 2	Generated cookie 15/15		

8. Cookies (Continued)

If you wish to clear all cookie generation tasks click the red “Clear Tasks” button located to the right of the “Create Tasks” button. You can also delete tasks individually by using the Red Trash Can icon to the right of each task. You can delete an entire Cookie List using the Red Trash Can icon next to the name of the site, located at the top of the page,

Although it is recommended & necessary to pre-generate cookies before a release using the Cookies Tab, sites often do ‘Cookie Purges’ which invalidate all cookies, meaning you have to generate again. This is where there is an “Enabled” checkbox next to the site name.

When the “Enabled Checkbox” is checked, you will be using your pre-generated cookies. When it is not checked, cookies from the list will not be used, and will instead be generated when needed when running tasks. This is significantly slower than using pre-generated but may be necessary if a ‘Cookie Purge’ occurs.

9. Tasks - Task Groups

SoleAIO V1 introduces Task Groups. Task Groups allow for a single site to be specified when creating the group, which will then house tasks of that specific site. This allows you to create a different task group/s for a single site, to allow for easier control, editing and management of tasks during a release.

Due to the fact many sites often release a sneaker at the same time, Task Groups allow for ease of switching between groups to view task status' and make additions without having to endlessly scroll through a single list housing many different sites.

To begin creating tasks, first create a task group by clicking the blue “New Task Group” button.

You will then be greeted with a pop up asking for a name for the Task Group. You can name these however you desire, but it can be useful to name them dependent on the site/release being chosen for clarity when viewing groups within the Navigation Bar. Then select the Site for this Task Group and hit “Create Group”.

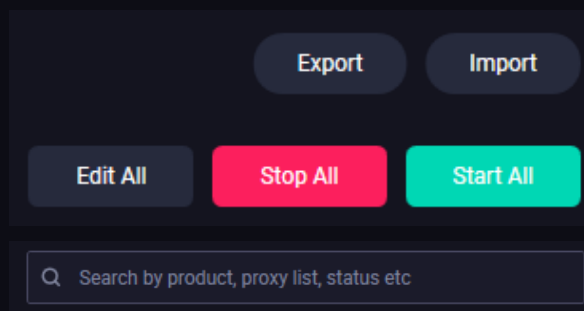

9. Tasks - General Task Information

Make yourself familiar with the other functions that can be used from the tasks page which will be needed and prove useful during releases:

- **Clear All Tasks:** Clears all created tasks from within this Task Group.
- **Import/Export:** These both allow for the Import/Export of tasks allowing you to move machines without having to remake your tasks.
- **Start All:** Starts all tasks within this Task Group.
- **Stop All:** Stops all tasks within this Task Group.
- **Edit All:** Brings up the Task Editor screen to be able to edit aspects of all currently selected tasks. If you do not have any tasks selected, this edits all tasks within this Task Group.

Note: To select specific tasks:

- 1) Hold down your mouse and drag down tasks to select them.
- 2) Hold the 'CTRL' key on your keyboard and click tasks you wish to select.
- 3) Use the Search Function to narrow down tasks, then all tasks currently displayed will be edited.

- **Green Start Button:** Starts that single task, which then changes to a blue pause button to pause the task.
- **Grey Edit Button:** Brings up the Task Editor for that single task.
- **Red Delete Button:** Deletes that single task.

If you wish to clear all tasks click the red "Clear All Tasks" button located to the right of the "Task Creator" button. You can also delete tasks individually by using the Red Trash Can icon to the right of each task.

You can also delete an entire Task Group using the Red Trash Can icon next to the Task Group name, located at the top of the page, or rename that Task Group by clicking the White Pencil icon.

You are able to make use of the Search Feature, to make it easier to locate different tasks. You are able to search via Product, Proxy List or Status to isolate tasks. When searching, tasks will be displayed that match any word in your search term. If you wish to search for the entire term only, you can add quotations around your search, for example: "Checkout Success".

9. Tasks - General Task Information (Continued)

You can also right-click a single task, or a selection of tasks to allow for ease of starting, stopping, editing, duplicating tasks, deleting tasks or viewing a tasks logs, or to archive a task group.

Archiving Task Groups is useful for if you do not want to fully delete a Task Group (as you want tasks created ready for potential restocks), but do not want them showing within the Task List.

Simply right click a Task Group and click "Archive Task Group" to hide it. To bring back Archived Task Groups, right click the 'Task Groups' header at the top of the left pane, and "Show Archived Task Groups", you can then right click the groups you want to unarchive and 'Unarchive Task Group'.

9a. Adidas Tasks

To create Adidas Tasks, first create a new Task Group, selecting Adidas as the site. Once you have created an Adidas Task group, click the blue "Task Creator" button to begin to create tasks for your desired release.

- **Region:** Select your region/the region you are running for from the dropdown list.
- **Product ID:** Enter the Product ID for your desired product. *Note: To locate a Product ID for an Adidas item, simply visit the product page and it is located at the end of the URL. Visit the release guides within the SoleAIO Discord as Product ID's for upcoming releases will also be posted there.*

A screenshot of a browser address bar with a white background. It shows a lock icon on the left, followed by the URL 'adidas.co.uk/ultraboost-shoes/BB6166.html'. The 'BB6166.html' part of the URL is underlined in blue.

- **URL:** For some regions, the URL is required for Splash Mode to work. For other regions and Non Splash it is completely optional. *Note: Refer to the release guide within the Discord for more information on the URL.*
- **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select 'Random' if you do not mind which size.
- **Mode:** Select what type of release the shoe is releasing via. Select 'Splash' if the item is releasing via a Splash/Waiting Room or Select 'FCFS' if the item is releasing via a product page, with no waiting room.
- **Proxy List:** Select the Proxy List you wish to use on these tasks.

9a. Adidas Tasks (Continued)

- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*
- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Splash releases, you should NOT use schedule, as you need to manually start tasks once the release begins, however this can be used for FCFS releases. *Note: The clock uses 24-Hour Military Time.*
- **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use. For example: If you have 10 Billing Profiles selected, and choose a quantity of 5, then 50 tasks will be created.

9b. YeezySupply Tasks

To create YeezySupply Tasks, first create a new Task Group, selecting YeezySupply as the site. Once you have created a YeezySupply Task group, click the blue "Task Creator" button to begin to create tasks for your desired release.

- **Product ID:** Enter the Product ID for your desired product. *Note: Locating a Product ID on YeezySupply before release is not always possible. We will always post the Product ID in a guide before the release, so ensure to check the 'YeezySupply Guides' category within the Discord.*
- **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select 'Random' if you do not mind which size.
- **Mode:** Select the release type the shoe is releasing via. Select 'Splash' if the item is releasing via a Splash Page/Waiting Room or Select 'FCFS' if the item is releasing via a normal product page, with no waiting room.
- **Proxy List:** Select the Proxy List you wish to use on these tasks.
- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*
- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Splash releases, you should NOT use schedule, as you need to manually start tasks once the release begins, however this can be used for FCFS releases. *Note: The clock uses 24-Hour Military Time.*
- **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use. For example: If you have 10 Billing Profiles selected, and choose a quantity of 5, then 50 tasks will be created.

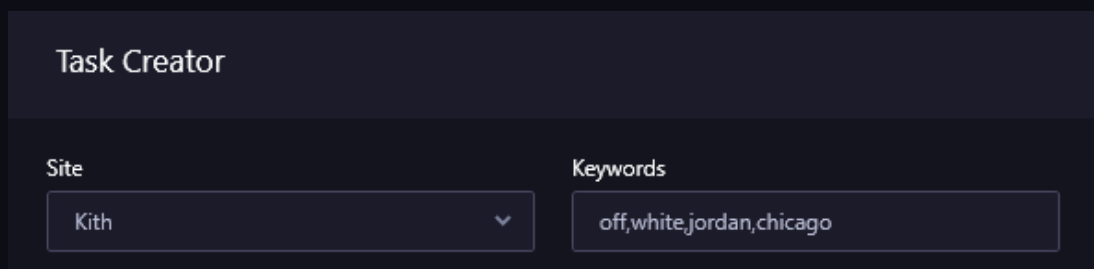

9c. Shopify Tasks

To create Shopify Tasks, first create a new Task Group, selecting Shopify as the site. Once you have created a Shopify Task group, click the blue “Task Creator” button to begin to create tasks for your desired release.

- **Site:** Use the drop-down list to select the Shopify site you are creating a task for. You can also create tasks for a Shopify site that is not specified in the drop-down list, by selecting the “Custom Shopify” option from the bottom of the drop-down.
- **Keywords:** When creating tasks for Shopify, either Keywords, URL or Variants can be used to specify the product you want to purchase.

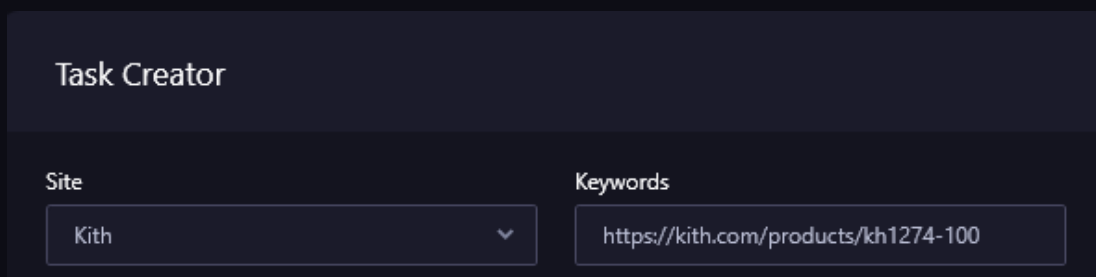

Keywords: Keywords are the most common input used, as they can simply be created by knowing what the product will be called. Keywords search the site for matching words to locate the product. To enter keywords simply enter the words that you expect to be in the product title, with a comma in between each word. *For Example: The product is the “Off White Jordan 1 Chicago”, so reasonable keywords for this would be: **off,white,jordan,chicago**.*

You can also make use of negative keywords by adding a “-” to specify words you DO NOT want to be in the title of the product. *For Example: You want to make sure you DO NOT pick up a Kids/GS/Toddler version, so reasonable keywords would be: **off,white,jordan,chicago,-gs,-toddler,-kids**.* This would mean that the product must include the words Off, White, Jordan and Chicago, but can NOT include the words GS, Toddler or Kids.

The screenshot shows a dark-themed form titled "Task Creator". It has two main input fields: "Site" and "Keywords". The "Site" field is a dropdown menu with "Kith" selected. The "Keywords" field is a text input containing "off,white,jordan,chicago".

URL: URLs are simply where you use the direct link of the product you wish to purchase. For new releases, it is often difficult to get the URL before the release, which is why most people use Keywords. However, certain groups get “Early Links” which are links that are predicted/found before a release. These can be used if you have access to them, however it is always recommended to also use “Keywords” tasks as a back-up, as it is always possible that an Early Link is not correct or will be changed by the retailer before the product releases.

The screenshot shows a dark-themed form titled "Task Creator". It has two main input fields: "Site" and "Keywords". The "Site" field is a dropdown menu with "Kith" selected. The "Keywords" field is a text input containing the URL "https://kith.com/products/kh1274-100".

9c. Shopify Tasks (Continued)

Variants: Every size of every item on a Shopify store has a "Variant ID" assigned to it, used by the retailers to directly correlate to a specific size of a specific shoe. Variant's usually provide the fastest checkouts, however, are most useful when running for Restocks on a product as it can be difficult to obtain Variants before a release.

Most people obtain Variants by them being posted within a sneaker group they are a part of, however, to obtain them manually, navigate to a product on a Shopify site, and then add ".json" to the end of the URL.

kith.com/products/kh1274-100

<https://kith.com/products/kh1274-100.json>

From the page that then shows, you can locate the Variants. The Variant you want to locate is the one noted beside "product_id", these differ per size so you will have to navigate the page to find the one pertaining to the size you wish to purchase. Below is an example, where the "product_id" is: [2069374959744](#) for Size: **XXS**.

```
variants":
  [{"id":19436962545792,
    "product_id":2069374959744,
    "title":"XXS",
    "price":"265.00",
    "sku":"12507142"}
```

You can then enter this "product_id" (the variant) into the Keywords section within SoleAIO. Note: As this Variant pertains to a specific size as well as a specific product, it will overwrite whatever size you select within SoleAIO when creating tasks, therefore "Size" can be set to anything/random when using Variants.

Task Creator

Site: Kith

Keywords: 2069374959744

• **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select 'Random' if you do not mind which size. *Note: This size pertains to the sizing that is used on the specific Shopify site you are running for. For Example: US sizing on Kith, UK Sizing on DSML.*

9c. Shopify Tasks (Continued)

• **Checkout Mode:** There are three main checkout modes: "Autocheckout", "Pre-Cart" and "DiscordCheckout". Elaboration on these two modes is provided below:

Autocheckout	This is the normal Autocheckout Mode. This should be used on sites that have a password page and should be used with a release timer set to the drop time.
Pre-Cart	This mode carts a random item before the drop and creates a checkout in order to bypass the queue, giving a faster checkout on drops without a password page. You should start tasks without a release timer varying the start time between 1-6 minutes before the drop
DiscordCheckout	This mode carts the item the same as Autocheckout Mode, but then sends the checkout to your Discord Webhook to check out manually.

• **Account:** Certain Shopify sites require an account to be used in order to checkout. Some of the main sites that use this include Concepts and Undefeated. See the "Accounts" section on Page 11 to learn how to import accounts into SoleAIO. Once accounts have been imported into an Account List, this Account List can be selected when creating tasks.

• **Question:** Certain Shopify sites require a question to be answered before a product can be added to cart. Elaboration on the Question Modes is provided below:

None	Select 'None' is the site does not use a Question. This will be used in 95% of instances as not many sites drop with a Question.
Silent	Select 'Silent Question' when there is not a visible question to answer, but the site has loaded a question 'silently' to try and block bots. This will not be used 99% of the time but was used on the likes of the Union Jordan drop.
Manual	Select 'Manual' when there is an actual question to be solved. This allows for a question to be answered in the Question Harvester. This is used on sites such as Haven, Deadstock, Premier and Eric Emanuel.

• **Proxy List:** Select the Proxy List you wish to use on these tasks.

• **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*

• **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Autocheckout Mode, you want to use the "Schedule" function and set a timer to just before the scheduled release time (e.g. 10:59:55), for Pre-Cart mode you should NOT use the scheduling function. *Note: The clock uses 24-Hour Military Time.*

• **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use. For example: If you have 10 Billing Profiles selected, and choose a quantity of 5, then 50 tasks will be created.

9d. Supreme Tasks

To create Supreme Tasks, first create a new Task Group, selecting Supreme as the site. Once you have created a Supreme Task group, click the blue "Task Creator" button to begin to create tasks for your desired release.

- **Category:** Select the category that the item you are trying to purchase will be loaded in. *Note: Each week a guide is posted in the Discord stating what category to select for each item dropping that week.*
- **Keywords:** Select the keywords for the item you are wanting to purchase. Similar to Shopify, separate each keyword with a comma, and use a "-" for negative keywords. *Note: Each week a guide is posted in the Discord stating what keywords to use for each item dropping that week.*
- **Color:** Select the color of the item you are wanting to purchase. SoleAIO picks up the colour even if it is partially right (e.g. If you enter "Grey" and it is "Heather Grey", your tasks will still pick up). *Note: Each week a guide is posted in the Discord stating what colors are available for each item dropping that week.*
- **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select 'Random' if you do not mind which size.
- **Quantity:** Select the quantity of items you want that task to purchase. Most of the time this can be kept blank as you may only purchase one item, however, for some of the smaller items such as the Supreme Oreo's, you were allowed to have multiple packs in the same order, therefore quantity can be changed.
- **Mode:** Select the mode you wish to use for these tasks. *Note: Each week may differ on which mode is likely to work best, refer to the Discord for updates on which mode/setup is suggested to run for best results.*

Normal	This is the normal request mode for Supreme. This is the fastest mode, however, can often be caught by Supreme's anti-bot detection. Run tasks with this mode, but also use the Hybrid mode as a back-up.
Hybrid	Although slower than Normal Mode, Hybrid Mode is more reliable as it makes use of a Browser to not be detected by Supreme's anti-bot detection. Use this mode along with Normal Mode to yield the best results.
Restocks	Use this mode when running for Restocks once a product has gone out of stock and when Supreme's anti-bot detection has been removed.

- **ATC Delay:** This is the delay the bot waits before adding the item to cart. You can leave this at the default of 200ms, however you may wish to lower this on some tasks, especially if the item you are trying to purchase is hyped. *Note: Lowering this delay significantly can lead to declines.*
- **Checkout Delay:** This is the delay the bot waits before submitting a checkout. You can leave this at the default of 1000ms, however you may wish to lower this on some tasks, especially if the item you are trying to purchase is hyped. *Note: Lowering this delay significantly can lead to declines.*
- **Proxy List:** Select the Proxy List you wish to use on these tasks.
- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*

9d. Supreme Tasks (Continued)

- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. I would recommend setting a timer to just before the release (e.g. 10:59:55), however this is not totally necessary, if you prefer you can manually start tasks right before the release too. *Note: The clock uses 24-Hour Military Time.*
- **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use.

9e. Off-White Tasks

To create Off-White Tasks, first create a new Task Group, selecting Off-White as the site, then click the blue "Task Creator" button to begin to create tasks for your desired release.

- **Region:** Select your region/the region you are running for from the dropdown list.
- **Product ID:** Enter the Product ID for your desired product. *Note: To locate a Product ID for an Off-White item, simply visit the product page and it is located at the end of the URL. The release guides within the SoleAIO Discord will also be posted there before a release when possible.*

off---white.com/en-gb/shopping/item-15284410

- **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select 'Random' if you do not mind which size.
- **Account:** Off-White do not usually 'require' accounts to be able to checkout, however orders can be less likely to be cancelled if they were placed when logged into an account. See the "Accounts" section on Page 11 to learn how to import accounts into SoleAIO, once accounts are imported, the list can be added here.
- **Checkout Mode:** Select whether you want to do Card Checkout or send a Webhook to pay with PayPal.
- **SMS Verification:** At the beginning of releases Off-White often require SMS Verification to be able to add to cart. Later in the release this is often turned off. Run tasks with both and look in the Discord Guide for Info.
- **Proxy List:** Select the Proxy List you wish to use on these tasks.
- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*
- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Off-White, task scheduling is not necessary – you can start the tasks at the time of release. *Note: The clock uses 24-Hour Military Time.*

9f. Footsites Tasks

To create Footsites Tasks, first create a new Task Group, selecting Footsites as the site. Once you have created a Footsites Task group, click the blue “Task Creator” button to begin to create tasks for your desired release.

- **Site:** Select the site you wish to run for from the dropdown list (Champs Sports, Eastbay, Footaction, Footlocker US, Footlocker CA or Footlocker Kids).
- **Product ID:** Enter the Product ID for your desired product. *Note: Locating the Product ID for a Footsites item is the same no matter which Footsite you are on. To locate a Product ID on a Footsite, simply visit the product page and it is located at the end of the URL, before '.html'. It is also located below the product image, at the beginning of the 'Details' tab next to 'Product #'. Product ID's will also be included in the release guides within the SoleAIO Discord before releases.*

<https://www.champssports.com/product/nike-tech-fleece-full-zip-hoodie-mens/U4489010.html>

<https://www.eastbay.com/product/adidas-originals-zx-2k-boost-mens/FX8835.html>

<https://www.footlocker.com/product/nike-air-force-1-07-le-low-womens/23498067.html>

- **Pre Solve:** Select this enabled to be able to Pre-Solve captchas before the drop. This means you will be able to pre-solve the captchas before the drop occurs, allowing an easier checkout once the release occurs.
- **Share Captcha:** Select this to share captchas between tasks. Instead of having to solve one captcha per task, enabling this will allow for only one to be solved: which is then shared to 25 tasks.
- **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select 'Random' if you do not mind which size.
- **Proxy List:** Select the Proxy List you wish to use on these tasks.
- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*
- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Footsites, task scheduling is not necessary – you can start the tasks at the time of release. *Note: The clock uses 24-Hour Military Time.*
- **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use. For example: If you have 10 Billing Profiles selected, and choose a quantity of 5, then 50 tasks will be created.

9g. Finishline/JDSports US Tasks

To create Finishline or JDSports US Tasks, first create a new Task Group, selecting Finishline or JDSports US as the site. Once you have created a Finishline or JDSports US Task group, click the blue "Task Creator" button to begin to create tasks for your desired release.

- **Site:** Select the site you wish to run for from the dropdown list (Finishline or JDSports US).
- **Product ID:** Enter the Product ID for your desired product. *Note: To locate a Product ID on Finishline or JDSports US, simply visit the product page and it is located within the URL. The Product ID begins with 'prod' and is followed by some numbers. Product ID's will also be included in the SoleAIO Discord Guides.*

```
https://www.finishline.com/store/product/mens-jordan-true-flight-basketball-shoes/prod783912?styleId=CU4933&colorId=001
```

```
https://www.jdsports.com/store/product/mens-nike-air-force-1-low-casual-shoes/prod795980?styleId=315122&colorId=001
```

- **Color ID:** Enter the Product ID for your desired product. *Note: To locate Color ID on Finishline or JDSports US, simply visit the product page and it is located at the end of the URL after 'colorId='. Color ID's will also be included in the release guides within the SoleAIO Discord before releases.*

```
https://www.finishline.com/store/product/mens-jordan-true-flight-basketball-shoes/prod783912?styleId=CU4933&colorId=001
```

```
https://www.jdsports.com/store/product/mens-nike-air-force-1-low-casual-shoes/prod795980?styleId=315122&colorId=001
```

- **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select 'Random' if you do not mind which size.
- **Proxy List:** Select the Proxy List you wish to use on these tasks.
- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*
- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Finishline and JDSports US, task scheduling is not necessary – you can start the tasks at the time of release. *Note: The clock uses 24-Hour Military Time.*
- **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use.

For Finishline/JD Sports you need to open V3 Solvers, to be able to solve Recaptcha V3s. It is recommended to open Chrome V3s, and it is highly preferable to use banned proxies on your tasks (not required).

9h. Mesh Tasks

To create Mesh Tasks, first create a new Task Group, selecting Mesh as the site. Once you have created a Mesh Task group, click the blue “Task Creator” button to begin to create tasks for your desired release.

- **Site:** Select the site you wish to run for from the dropdown list (JD, Size or Footpatrol).
- **Product ID:** Enter the Product ID for your desired product. *Note: To locate a Product ID on Mesh, simply visit the product page and it is located at the end of the URL. It is also located below the product image, at the beginning of the ‘Product Info/Details’ tab. Product ID’s will also be included in the release guides within the SoleAIO Discord before releases.*

On JD, Hip Store and Size, the Product ID is usually 8 numbers long, and looks like this:

jdsports.co.uk/product/grey-nike-hybrid-joggers-mens/16038104/

size.co.uk/product/green-stussy-peace-and-love-hoodie/16044855/

thehipstore.co.uk/product/norse-projects-twill-sports-cap/16027384/

On Footpatrol, the Product ID is usually 6 numbers long, and followed by ‘_footpatrolcom’, like this:

footpatrol.com/product/blue-adidas-zx-4d/384169_footpatrolcom/

- **Size:** Select the size(s) that you wish to purchase. You are able to select multiple sizes from the dropdown list if there are specific sizes you wish to purchase. Select ‘Random’ if you do not mind which size.
- **Checkout Mode:** PayPalManual opens a browser once carted, where you can log in with PayPal and complete payment. PayPalAutocheckout uses your Billing Profiles Card Details with PayPal Guest checkout.
- **Proxy List:** Select the Proxy List you wish to use on these tasks.
- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing ‘All’ when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*
- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Mesh, task scheduling is not necessary – you can start the tasks at the time of release. *Note: The clock uses 24-Hour Military Time.*
- **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use. For example: If you have 10 Billing Profiles selected, and choose a quantity of 5, then 50 tasks will be created.

9i. Dicks Sporting Goods Tasks

To create Dicks Tasks, first create a new Task Group, selecting Dicks as the site. Once you have created a Dicks Task group, click the blue “Task Creator” button to begin to create tasks for your desired release.

- **Variant:** Enter the Variant Codes for the shoe/size you wish to purchase. These are NOT normal variants, and the variant codes you MUST use are located within the [#dsg-variant-codes](#) channel within the SoleAIO Discord. Take the variant code for the shoe/size you desire and enter this in the variants box.

The screenshot shows a task creation form with the following fields and controls:

- Variant:** A text input field with the placeholder text "Variant".
- Proxy List:** A dropdown menu with the placeholder text "Proxy List".
- Billing Profile:** A dropdown menu with the placeholder text "Billing Profile".
- Schedule:** A date/time selector showing "16 Nov 2020" and "02:21:00" with a radio button to the right.
- Quantity:** A numeric input field with a value of "1" and minus/plus buttons.

- **Proxy List:** Select the Proxy List you wish to use on these tasks.
- **Billing Profile:** Select the Billing Profile(s) to be used on these tasks. *Note: You can select an entire Billing Group by choosing 'All' when clicking on a Billing Group name or can select singular Billing Profiles from within a group by clicking on the specific profiles.*
- **Schedule:** To schedule tasks, first click the checkbox to allow for the date/time to be edited. You can then set the date/time you wish the tasks to start. For Mesh, task scheduling is not necessary – you can start the tasks at the time of release. *Note: The clock uses 24-Hour Military Time.*
- **Quantity:** Select the amount of tasks you wish to create. One task is created per billing profile you have selected to use. For example: If you have 10 Billing Profiles selected, and choose a quantity of 5, then 50 tasks will be created.

Start tasks and let them loop on Checking stock, Product OOS or start them on a release timer if you only want to start at a specific time. If tasks freeze and get stuck, restart them.

Use 3000-10000ms delays.

10. Extra Features, Tips & Tricks

Right Click Functions:

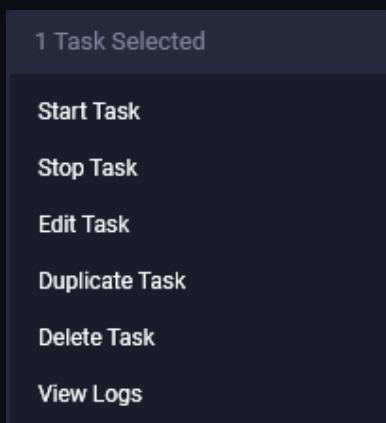

There are many right-click functions within the bot for your ease:

- Right Click a Task Group within the left pane to be able to control all tasks within that group, without even opening that Task Group.
- Right Click a Task to control that specific task.
- Right Click a Task to view that tasks logs.

Keyboard/Drag Functions:

You can make use of Shift + Ctrl along with dragging your mouse to select specific/multiple tasks at once:

- Shift: Click a task, hold Shift, then click another task – every task in between these will be selected.
- Ctrl: Use this to select specific tasks. Hold Ctrl and click the tasks you wish to select.
- Mouse Drag: Hold your mouse on a task and drag down/upwards. All these tasks will be selected.

Collapse Sidebar:

You can collapse the left sidebar to have more room to view the right hand pane. This can be done with the arrow to the right of the Settings Icon.

Keyword Sets:

You can make use of 'Keyword Sets' if you are unsure on what keywords may be for a specific site, by separating them with a "/".

For Example: "yeezy/350/kanye" would first search for "yeezy", if a product isn't found it would then search for "350", and then for "kanye".

10. Extra Features, Tips & Tricks (Continued)

Pop Out Delay Window:

You can make use of the pop out Delay Window to be able to change delays of specific task groups without being on the Settings Page. This can be opened from the “Delays” button on the Settings Page or press F3.

Discord Rich Presence:

To enable other Discord Users to know you are currently using SoleAIO – you can show it in your discord rich presence.

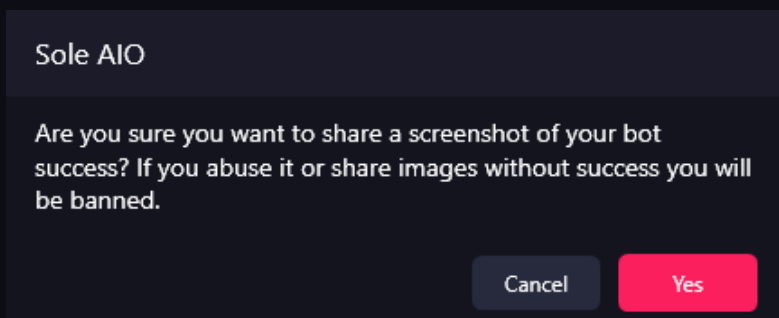

Head to “User Settings” in Discord, then “Game Activity” and enable “Display currently running game as a status message”.

Function Keys:

You can make use of the function keys on your keyboard to perform tasks within the bot:

- F1: Mass Edit Window – Brings up the Mass Edit Window for the current Task Group you are viewing.
- F2: Mass Link Change – Mass link changes every task with the link currently in your clipboard.
- F3: Delay Window – Brings up the Delay Window to be able to quickly edit tasks delays.
- F4: Success Sharing – Press F4 to share your current bot screen in the #user-success channel within the Discord. *Note: Abuse of this will result in your license being banned, with no chance of being unbanned. Only use this to post when you have had success within the bot.*
- F5: Check For Updates – Checks if there are currently any pending updates you are yet to install.
